

UNINET ANNOUNCES THE RELEASE OF "NON-HP SUPPLY/CARTRIDGE INSTALLED" CHIPS

By Joe Cachia and the Technical Staff at UniNet

In collaboration with HP®'s IP & Brand Protection Team, UniNet has re-designed certain smartchips for printers identified by HP® as requiring "Non-HP" to be displayed or shown on the Status Page and Printer Display.

The October, 2013 White Paper by HP® listed specific existing printer models requiring this modification, and notified the industry that future printers require this feature as well.

We have confirmed with HP® that aftermarket chips that properly identify themselves as "Non-HP" will not lose access to functionality and will not result in a loss of features or degraded performance. The "Non-HP" message will only appear on the printer's display on first installation or warm-up; afterwards, "READY" will appear on the display.

UniNet is pleased to announce that older versions of HP printers that experience functionality loss with the "Non-HP" feature are excluded from the affected list of printers, so those chips will continue to display "Genuine HP."

At UniNet, we value the Intellectual Property Rights of others, as well as our own. Cooperation with HP® is important to avoid any brand misidentification. "Non-HP Supply" display smartchips are available for the machines shown on the following page.

Note that with this version of smartchip:

UNINET ANNOUNCES THE RELEASE OF “NON-HP SUPPLY/CARTRIDGE INSTALLED” CHIPS

Uninet has currently discontinued production of “Genuine HP Supply” chips as affected by the White Paper, and is working with remanufacturers and distributors to manage the proper depletion of current “Genuine” inventory.

UniNet will continue to monitor the industry for news of any changes that may further impact these products, and work with our customers to ensure a seamless transition.
