

WHY USE SHIPPING LOCKS, DEVELOPER ROLLER COVERS, AND DRUM COVERS?

By Mike Josiah and the Technical Staff at UniNet

Many new OEM cartridges these days are coming with shipping locks, developer roller covers and drum covers installed.

These items are very important in preventing storage problems and limiting end user problems on your finished cartridges.

They are also an excellent way to protect your cores while in storage.

Shipping Locks are increasingly important in separating the PCR or developer roller (depending on the model) from contacting the drum. When stored over time the PCR and/or developer roller can develop a flat spot that will cause print defects that will typically not go away after the cartridge starts to be used. Installing the shipping locks prevents these flat spots and will keep your remanufactured cartridges in top shape. These locks are also a very good idea to install on your cores for the same reasons.

Developer Roller Covers are used on cartridges where the developer roller is exposed (such as most Brother toner cartridges). The developer roller can easily be damaged by contact with the packaging or any other foreign objects. They also prevent the users hand from contacting the roller when removing the cartridge from the packaging. The oils normally present in our skin can cause print defects when developer rollers are touched. The covers also keep the end user mindful of this so they are more careful when handling the cartridge. As with the shipping locks, these covers are also a good idea to use on your cores to keep the developers in the best shape possible while waiting to be remanufactured.

Drum Covers are best used on cartridges where the drum is exposed and the OEM cartridges do not have any built in covers such as most of the Lexmark “E” and “T” series of cartridges. The cover prevents damage to the drum from packaging, and improper handling by the end user. As with the shipping locks and developer roller covers, they are also a great items to use on your cores to protect the drums during storage.

All three of these items protect your finished remanufactured cartridges from storage, packaging and/or end user damage. They also help keep your cores in the best shape possible while waiting to be remanufactured. They are all inexpensive parts that will protect valuable cartridges weather remanufactured or cores from harm.

UNINET QUALITY SHIPPING LOCKS, DEVELOPER ROLLER COVERS AND DRUM COVERS AVAILABLE FOR THE LATEST ENGINE RELEASES...

SHIPPING LOCKS

Description	Part #
Shipping Lock and Drum Cover Set for Samsung CLP-415/CLX-4195	18217
